DIRECTED DONOR REPEAT LAB POST 6 MONTHS	\$375.00
DIRECTED DONOR SHORT TERM STORAGE per 6 months (per ejaculate)	\$110.00
DIRECTED DONOR LONG TERM STORAGE (banking longer than one year) per year (per ejaculate)	\$110.00

There are 2 ways of banking as a directed donor. Long term banking is for clients that bank their sperm for long term storage due to potential loss of fertility due to surgery or a medical therapy that could render them sterile and they wish to have the option of using the specimens in the future on a non sexually intimate partner such as a gestational carrier/surrogate. They plan to store their specimens for longer than one year.

The other option is short term directed donor banking. This is for clients who are banking as a known donor for a friend/family member or for use on a gestational carrier/surrogate and are planning to use their specimens soon after they are released from the 6 month quarantine or within one year of when they were originally banked.

The fees listed above are subject to change based on cost increase of liquid nitrogen plus inflation. Sperm banking unfortunately is not usually covered by medical insurance. We ask for payment at the time of the visit; we then issue an itemized insurance form to the patient. This form can be submitted to his insurance company for reimbursement if covered under his insurance plan.

A written request with a notarized signature is required to discard specimens. Storage fees are not credited on specimens withdrawn or discarded that are stored for more than 3 months into your billing year. Past due accounts are subject to late fees.
